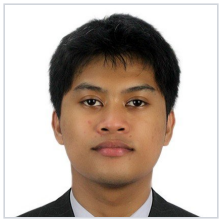
SYDRICK PARRA

+639917553063 | sydparra06@gmail.com | https://sydrick696995.github.io/PORTFOLIO/



OBJECTIVE

Computer Science graduate skilled in web development, databases, and AI/ML, with hands-on experience using Python, JavaScript, Flask, Neo4j/Cypher, and SQL to build practical software applications.

EDUCATION

Bachelor of Science in Computer Science **July, 2022 - July 2024**

Camarines Sur Polytechnic Colleges *Nabua, Camarines Sur*

PROJECTS

CareerGraph — Graph-Based Career Recommendation Platform **2026**

Full-Stack Developer https://careergraph-ehpd.onrender.com/

- Engineered a Flask and Neo4j career platform, connecting skills, roles, projects, and learning resources.
- Implemented multi-hop Cypher queries, enabling graph-based career path recommendations.
- Built parameterized queries and error handling, improving application security and reliability.
- Deployed the application with automated tests and seed data, delivering a functional hosted platform.

C A. L I.: REAL-TIME CALISTHENICS FORM CHECKER USING YOLOV8 AND POSE ESTIMATION **2025 – 2026**

Backend Developer | Data Tester

- Developed YOLOv8 pose-estimation components, enabling real-time exercise form analysis
- Designed movement-analysis workflows, supporting automated identification of exercise-form deviations.
- Tested model outputs and datasets, improving the reliability of form analysis.

CERTIFICATIONS & LICENSES

- GitHub Foundations — DataCamp, 2026
- 1th Bicol Youth Congress in Information Technology Junior Philippine Computer Society – CSPC Chapter
- On-the-Job Training — AI Research for Community Development, CSPC March–April 2026

SKILLS

- Programming: Python, JavaScript, PHP, SQL; Web: HTML, CSS, Flask, REST APIs; Databases: Neo4j, Cypher, SQL; AI/ML: YOLOv8, Pose Estimation, Data Testing; Development: Git, GitHub, Automated Testing, Parameterized Queries

EXPERIENCE

AIRCoDE | CSPC **March 2026 – April 2026**

AI./APP Development Group *Nabua, Camarines Sur*

- Enhanced the APAW interface and map navigation, improving usability and mobile responsiveness.
- Developed weather monitoring and visitor logging features, expanding system functionality and data visibility.
- Tested system features and AI solutions, identifying issues and improving application reliability.
- Resolved hardware and workstation issues, supporting a productive development environment.
